

ScentScape™

ScentScape™ is an innovative digital scent delivery system which provides the extra dimension of scent to gaming, entertainment and other consumer markets. Scent Sciences' technologies enriches the user experience by layering scents to enhance immersion and presence with unique delivery hardware, software and services.

Simply connect the Plug-N-Play unit to any compatible PC or gaming console for an instant experience of sight, sound and smell. Using the ScentScape™ digital scent delivery system, the ScentEditor™ is an easy to use application which provides the tools to add scent during the editing process of home videos, movies and other digital media.

In the gaming environment, synched with the action, scent-enabled media directs the release of ScentScape™ scents providing background scents such as pine forest or ocean and from more scene related scents such as flowers and smoke to games or entertainment media. Imagine "Avatar" audiences whose first experience with the Pandora biosphere is tinged with a unique scent "color", who smell the Na'vi coming before they're visible, and where Neytiri has an especially pleasing version of the Na'vi scent. The addition of these scents adds a uniquely immersive experience.

ScentScape™ specifications:

- Provides 20 basic scents per cartridge
- Scent cartridges last 200 hours or more in heavy use, depending on personal settings
- ScentScape™ scent cartridges will be available in standard and media-specific versions
